Dear Webasto user,

We presume that the principle and mode of operation of your new heater has been explained to your complete satisfaction by the workshop / service centre which installed the heater. This manual summarizes the main points of importance for using the heaters Thermo Top C and Thermo Top E, as well as the handheld transmitter Telestart T70/T80.

The water heaters Thermo Top C and Thermo Top E have been type-tested and approved in accordance with Directives 2001/56/EC (heaters) and 72/245/EEC (EMC) within the territory governed by European Directive 70/156/EEC.

The units must be installed in accordance with the enclosed installation instructions.

### General information

**Maintenance and safety instructions**

The water heaters Thermo Top C and Thermo Top E have been type-tested and approved in accordance with Directives 2001/56/EC (heaters) and 72/245/EEC (EMC) within the territory governed by European Directive 70/156/EEC.

The units must be installed in accordance with the enclosed installation instructions.

### Action in the event of faults

<table>
<thead>
<tr>
<th>Fault description</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heater switches off automatically (= fault lock-out).</td>
<td>No combustion after starting and restarting. Flame goes out during operation.</td>
<td>Switch off heater and switch on again (not more than twice).</td>
</tr>
<tr>
<td>Heater does not switch on.</td>
<td>Heater is without electric power.</td>
<td>Check power supply to heater and ground connections.</td>
</tr>
<tr>
<td>Heater switches off during operation (= fault lock-out).</td>
<td>Heater has overheated due to lack of coolant.</td>
<td>Refill coolant as directed by manufacturer.</td>
</tr>
</tbody>
</table>

### Operating and maintenance instructions

**Webasto Thermosysteme International GmbH**

Postfach 80 - D-82132 Stockdorf - Hotline (01805) 93 22 78
Hotfax (0395) 55 92-353 - http://www.webasto.de

Visit www.butlertechnik.com for more technical information and downloads.

### To cancel the fault interlock

- **Interrupt power supply by removing the 20 A fuse (yellow) in the heater cable harness**
- **Briefly press ON button on transmitter on left or press button on timer**
- **Interrupt power supply by removing the 20 A fuse (yellow) in the heater cable harness**
- **Refit the fuse. The heater switches on again.**

**Danger of explosion and suffocation!**

The heater **must not be operated:**

- In filling stations and tank farms.
- In places where explosive vapours or dust may build up (e.g. near fuel, coal, wood dust or cereal stores).
- In enclosed rooms (e.g. garages), not even via the timer or Telestart.

The heater **must not:**

- be exposed to temperatures of more than 120 °C (storage temperature), otherwise the electronics may suffer permanent damage.
- be operated without at least 20% brandname anti-freeze in the water of the heating circuit.

Please contact a Webasto service centre if the fault cannot be remedied in this way.
The heater can be started via the timer or Telestart unit, depending on its configuration.

Before switching on the heater, the vehicle heating must be set to “warm”. The heater must not be restarted until the unit has been checked by personnel duly trained by Webasto.

The heater must:

- be operated with the fuel specified on the rating plate and at the nominal voltage specified on the rating plate.
- be taken out of operation by removing the fuse if smoke develops, if unusual burning noises are heard or if there is a smell of fuel. The heater must not be restarted until the unit has been checked by personnel duly trained by Webasto.
- be operated for 10 minutes at least once per month, with the engine cold and the fan set to the minimum setting. The heater must be inspected by a specialist at the beginning of the heating season or earlier.

Setting the duty period

The next duty period is called up by pressing the OFF button. To save the setting:
- No button pressed for 10 seconds or
- press the ON button.

Restore default setting

Simultaneously press both the ON and the OFF button for approx. 10 seconds, until the LED goes out.
Default setting: Heating mode, 30 minutes.

Check batteries

Press the ON or OFF button.

Batteries | LED | Action
--- | --- | ---
OK | Lights up red (heating) or green (ventilation) for 0.5 seconds after 1 second | - Heat batteries to over 0 °C
Low | Flashes orange for 3 seconds after 1 second | - Replace batteries as soon as possible
Empty | Lights up orange for 5 seconds after 1 second | - Heat batteries to over 0 °C
- Replace batteries

Liability:

Non-compliance with the installation instructions and the warnings contained therein will lead to the exclusion of all liability by Webasto. The same also applies if repairs are not undertaken by professionals or without using genuine spare parts. This invalidates the type approval for the heater and its homologation / EC type permit.

Operation of the heater

The heater can be started via the timer or Telestart unit, depending on its configuration. Before switching on the heater, the vehicle heating must be set to “warm”. The heater fan in the vehicle should be set to the 1st speed in the case of a 3-speed fan and to the 2nd speed in the case of a 4-speed fan. Fans with infinitely variable speed should be set to at least 1/3 of the fan performance.

NOTE: We recommend that the heating time be set in accordance with the driving time. Heating time = driving time
Example: For a journey lasting approx. 20 minutes (one way), the duty period should not exceed 20 minutes.

If the optional summer / winter switch has been installed for the heater, it must be set in accordance with the time of year. In this case, the heater will heat the interior of the vehicle when set to the winter position and merely operate the vehicle fan to ventilate the interior of the vehicle when set to the summer position.

Visit www.butlertechnik.com for more technical information and downloads.
The Webasto heaters – Thermo Top, Thermo Top T, Thermo Top C and Thermo Top E – as well as the vehicle fan can be switched on and off under remote control from a distance of up to 600 metres with the Webasto Telestart T70/T80. A mode change must be made on the transmitter in order to switch on the vehicle fan (ventilation of the vehicle).

The duty period after switching on via the transmitter is limited by the receiver. The maximum range can be reached in open country. A shorter range must be expected in built-up areas.

**General**

The Webasto heaters – Thermo Top, Thermo Top T, Thermo Top C and Thermo Top E – as well as the vehicle fan can be switched on and off under remote control from a distance of up to 600 metres with the Webasto Telestart T70/T80. A mode change must be made on the transmitter in order to switch on the vehicle fan (ventilation of the vehicle).

The duty period after switching on via the transmitter is limited by the receiver. The maximum range can be reached in open country. A shorter range must be expected in built-up areas.

**NOTE:**
A minimum distance of 2 metres must be maintained between the handheld Telestart transmitter and the vehicle antenna or the antenna on the handheld transmitter must be shielded with the other hand when
- learning the Telestart handheld transmitter,
- switching the heater on and off,
- switching the vehicle fan on and off.

Visit www.butlertechnik.com for more technical information and downloads.

---

**Learning the Telestart transmitter**

1. Place batteries in the battery compartment of the transmitter.
2. Remove 1 A fuse (black) from the heater fuse holder (interrupt power supply).
3. Wait for at least 5 seconds.
4. Refit fuse in heater fuse holder and press OFF button on transmitter for at least 1 second within the next 5 seconds.
5. Learning is complete.

A second or third handheld transmitter can be learned in the same way.

**Check mode**

Press and hold ON and OFF buttons simultaneously.

LED lights up:
- red = Heating mode
- green = Ventilation mode

LED goes out:
- when the buttons are released or after 10 seconds.

**Change mode**

Simultaneously press ON and OFF buttons twice within one second.

The LED changes colour when the buttons are pressed for the second time and remains lit until the buttons are released.

The selected mode (heating or ventilation) is only set in the receiver when the next signal is transmitted.
Hold handheld transmitter with antenna pointing straight upwards and press the ON button for 1 or 2 seconds.

**NOTE:**
In heating mode, the vehicle heating must be set to "warm" before leaving the vehicle. In both heating and ventilation modes, the vehicle fan must be set to the 1st speed in the case of a 3-speed fan and to the 2nd speed in the case of a 4-speed fan. Fans with infinite adjustment must be set to at least 1/3 of the fan performance.

**Switch heater or ventilation on**

Via handheld transmitter:
Hold handheld transmitter with antenna pointing straight upwards and press the OFF button for 1 or 2 seconds.

Via timer:
Press the direct heating button twice.

**Check and set duty period**
The duty period of the heater or vehicle fan can be set on the transmitter in 10-minute increments. The duty period is set to 30 minutes as the manufacturer’s default setting.

**NOTE:**
The duty period must be set to 20 or 30 minutes in heating mode for the Thermo T op and Thermo T op T heaters. The heating time should correspond to the driving time for Thermo Top C and Thermo Top E heaters. For instance, if the vehicle is used for driving to and from work,open approve 30 minutes (one way).

**Check duty period**
Simultaneously press the ON and OFF buttons three times briefly in succession within one second.

**NOTE:**
The first flashing pulse output simultaneously with the third actuation of the two buttons must also be counted.
The LED flashes in accordance with the set duty period.
