Subject: *Upgrading Heater Harness Modification Kit*

Please forward this information to the Webasto dealers & customers in your area.

Details are below of how to change over the Dual Top cable harness (old to new)

The very first Dual Top RHA 100 which were produced up until May 2008 did not come with an external electrical connector on the main heater harness. To exchange those units (Identnr.: 9015314A) it has been necessary for the dealer to cut and splice the cable harness.

To ensure a proper and long lasting connection a kit is now available as part number 1315728A.

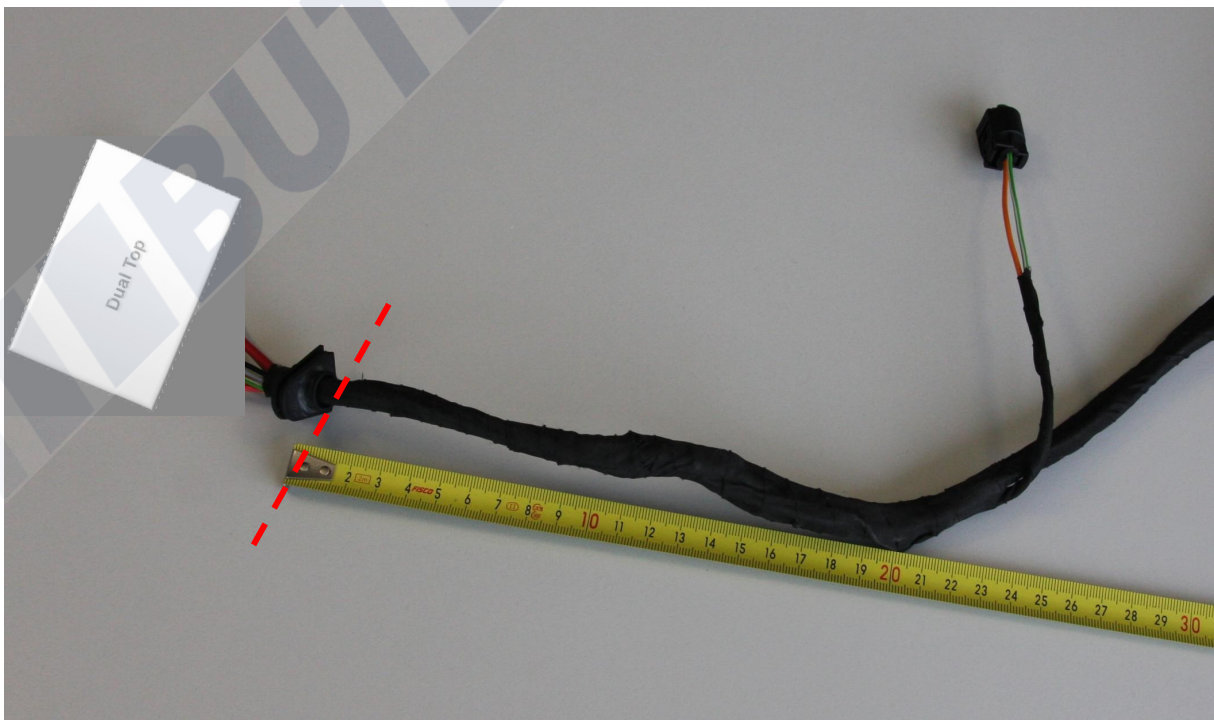

The method for changing is as below..

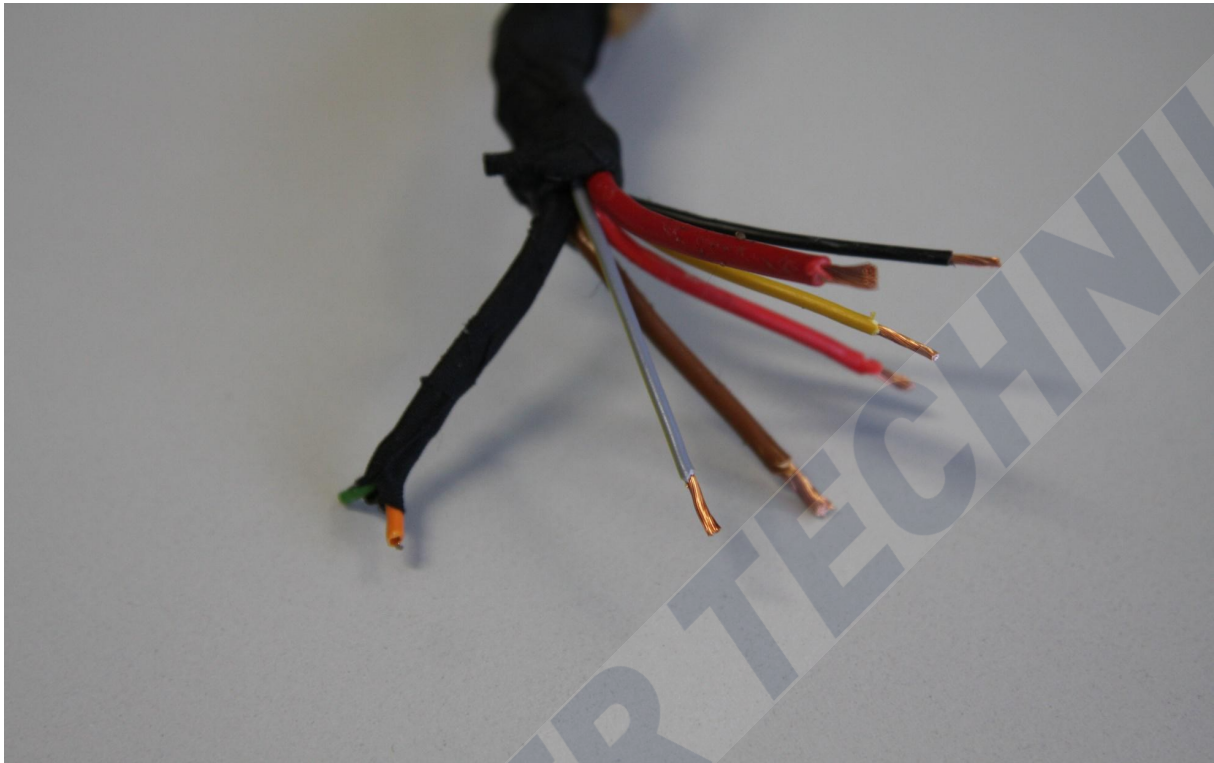

Tools Required

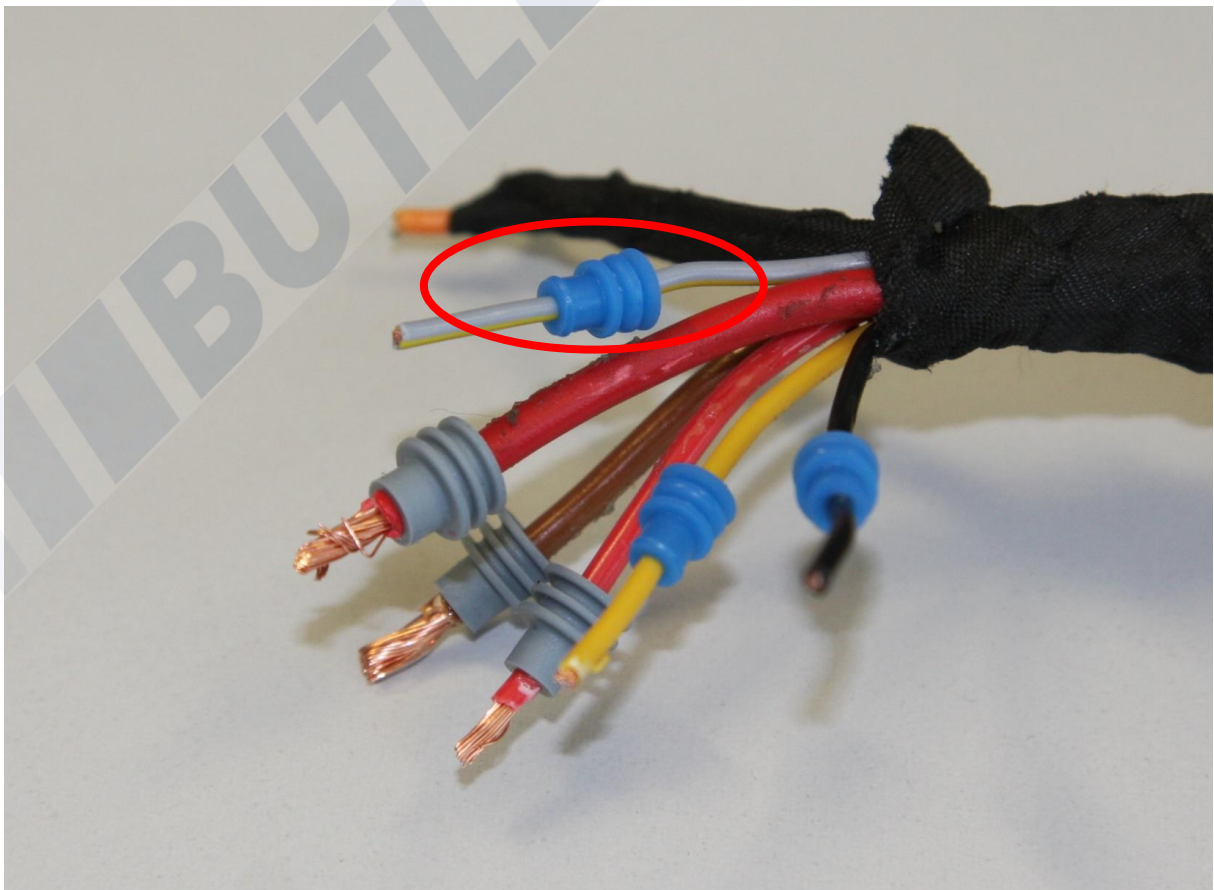

Cut Harness

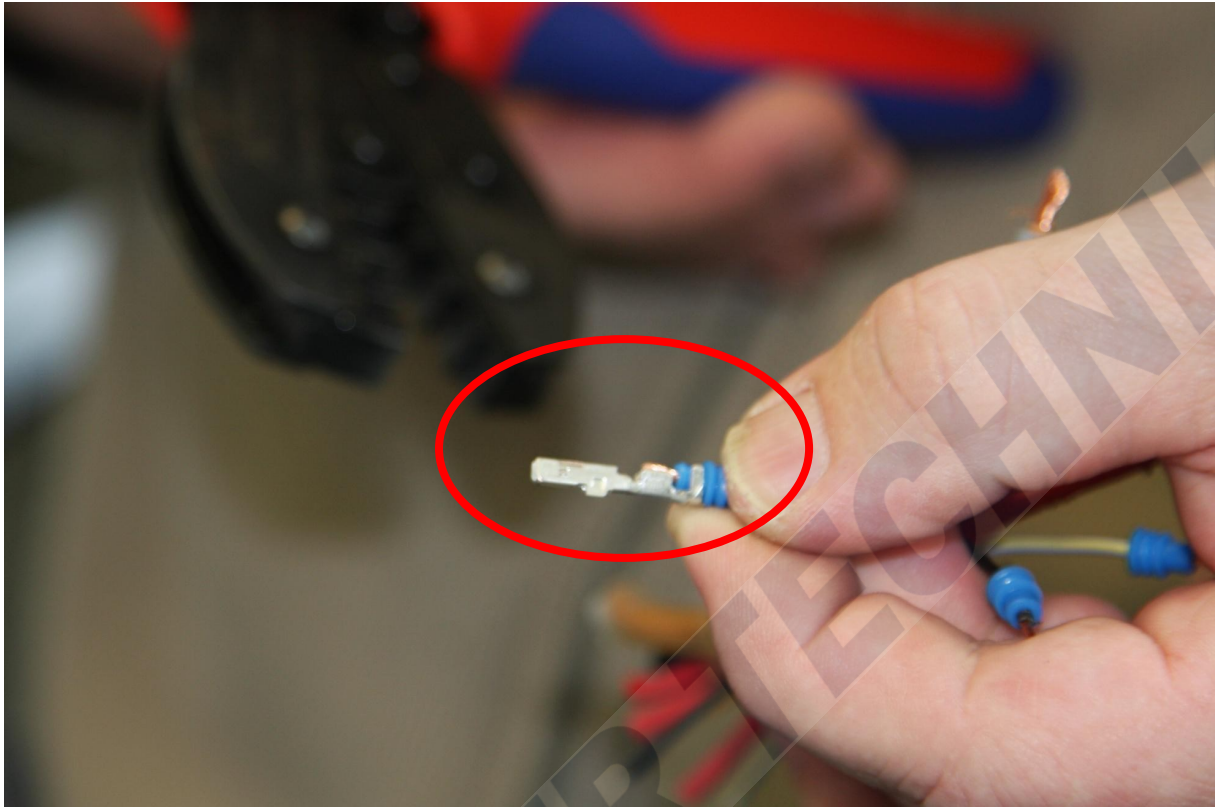

Strip Wires

Put Seals onto Wires

Fit terminal as shown

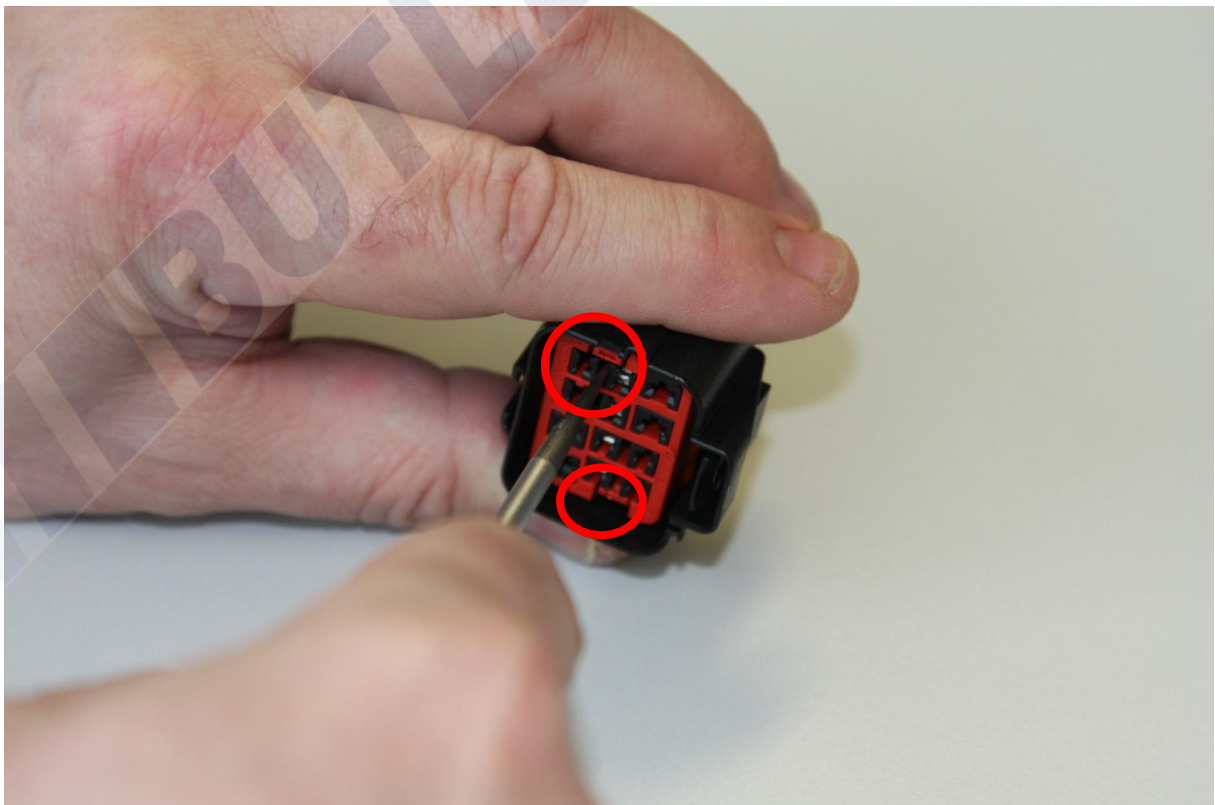

Crimp terminal onto wire

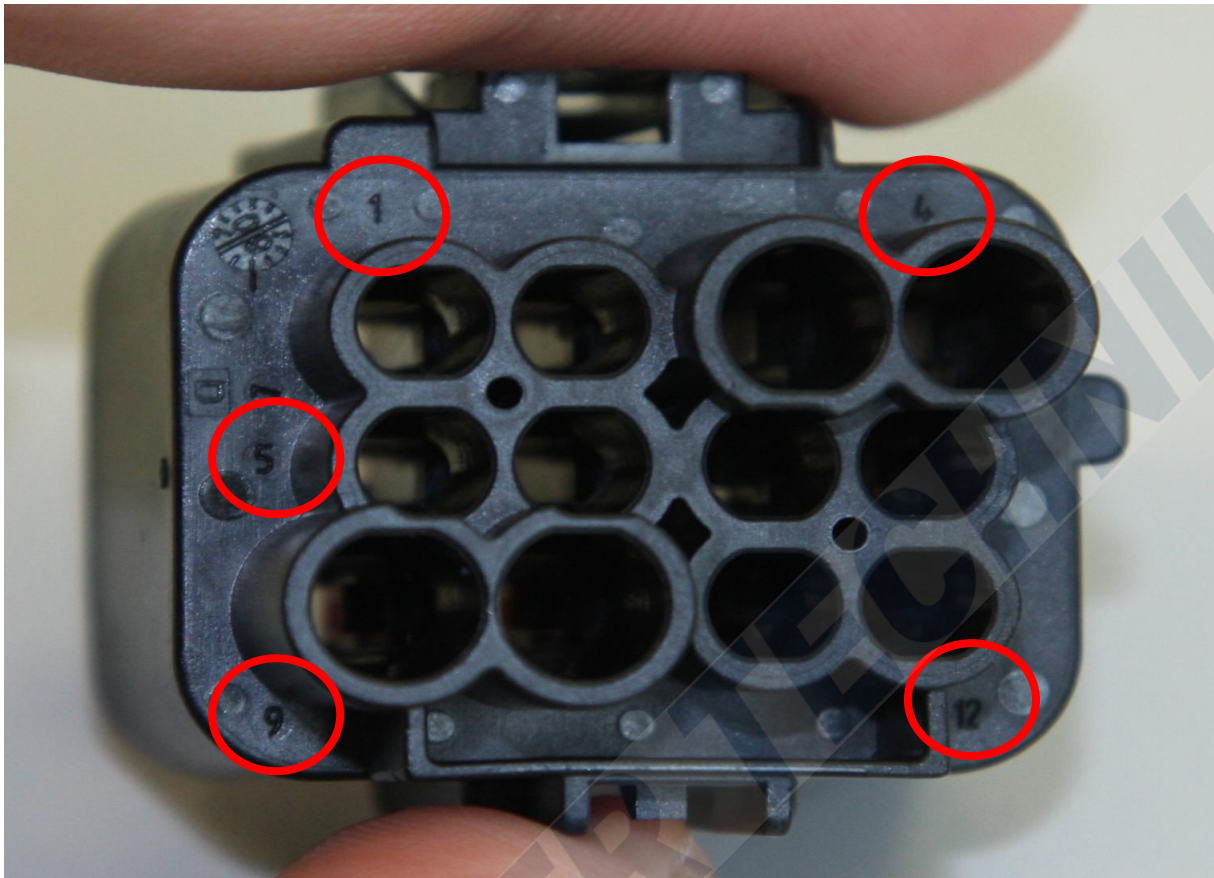

Repeat process for all

Remove the anti backout from housing

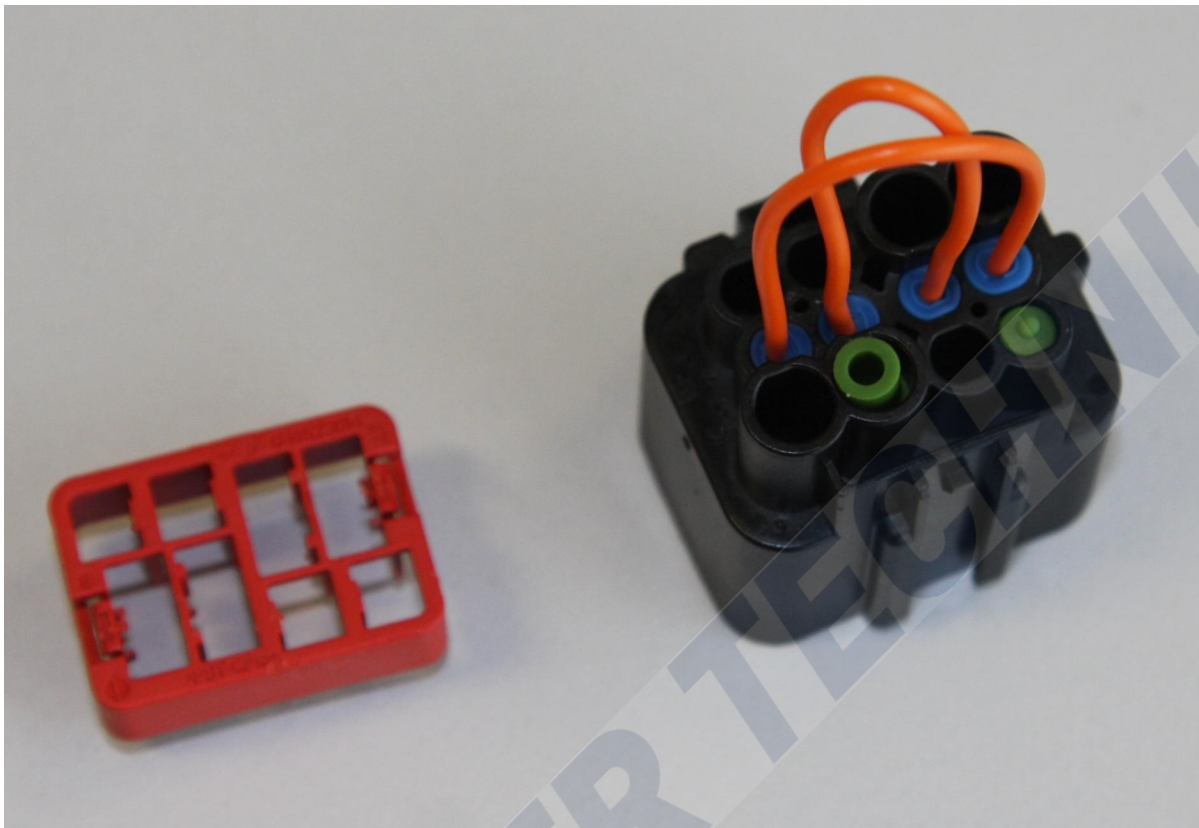

Note the numbers on the housing

Fit the two stoppers as shown

Fit the two link wires as shown

Insert the harness wires as shown on page 8

Location of wires in plug
