

Phone Activation for Webasto Heaters

Webasto **Thermo Call TC4 Advanced** offers an easy and smooth way to operate your heating system. No need to use a separate control panel - just simply use your phone. Whether you are using a fixed line or a mobile phone your heater is always accessible, regardless of distance and ranges.

The Thermo Call needs a SIM card with sufficient credit in order to operate. The optional feedback function may result in additional SMS costs, dependant upon the phone contract. The Webasto Thermo Call TC4 is backwards compatible with previous versions of Thermo Call TC3.

The Thermo Call App is available for free download via the Apple App Store or Google Play Store

The **Thermoconnect (TCON 2)** is a subscription service with the first year being free and thereafter currently €34.99 per year. This uses both the GSM phone network and GPS locating. It is also web as well as App based so connection can be made anywhere. It can also be linked to Smart Home Systems.

The installation is a "Plug N Play" concept and interfaces with our current Air Top 2000STC RV & TTEVO RV.

The highlight is a new interface APP and a feature called GEO Fencing. Geo fencing is the ability to create a virtual fence around the vehicle and check its location.

There is no SIM Card to buy as this is a subscription contract. The first year is free and then 34.99 euros thereafter per year.

A demonstration video can be found here - <https://youtu.be/a3q733C5vt8>
